

Sample Information

Sample ID: 20430124

Cat's Name: Kitty

Cat's Age: 4 yr Cat's Gender: Female

Cat's Breed: Tabby

Owner's Information

Owner's Name: Last: John First: Smith

Email Address (for results):

notarealemail@gmail.com

Address: City: New York State: NY

Zip: 12345

Test checklist:

Method: CDM001

Swab received

Mouth swab done properly

Test passed internal Quality Control

Report date: 11/10/2020

Results: Negative- No Virus Detected

Recommended Next Step: Check again in 6 months

Results Interpretation:

Virus Copy Number(s)	Result
0	Negative- No Virus Detected
100-1000	Positive
More than 1000	Strongly Positive

What do the results mean? Your cat tested negative for the presence of FeLV in their saliva. These results mean that no active FeLV was found and that your cat is most likely non-contagious to others. This is great news! But it does NOT mean your cat is not infected or was not previously infected with the FeLV virus. If your cat is sick, please make sure to visit your vet for a complete checkup.

Thank you for choosing CatDX!

CatDx LLC testing is a screen only, and should not be used for treatment decision. For a complete test please consult your local veterinarian.
